

Crypto market overview and macro context

(25 May 2026)

Latest cryptocurrency prices (USD)

asset	latest price (USD)	evidence
Bitcoin (BTC)	The Mudrex price tracker shows that 1 BTC = 77,351.6 USD as of 25 May 2026 12:05 PM ¹ .	Mudrex price page ¹
Ethereum (ETH)	On the same date, 1 ETH = 2,114.76 USD ² .	Mudrex price page ²
Solana (SOL)	1 SOL = 85.76 USD ³ .	Mudrex price page ³

Prices reflect mid-day quotes on 25 May 2026 and are used as base values for the technical analysis below.

Macro environment

indicator/asset	recent value & context	evidence
DXY (U.S. Dollar Index)	Trading Economics reports the DXY at ≈98.98 on 25 May 2026, down about 0.26 % as investors reassessed U.S. growth after a jump in inflation ⁴ .	Trading Economics ⁴
USD/JPY	On 25 May 2026 the USD/JPY rate fell to ≈158.94 as the yen strengthened slightly amid easing oil prices and a softer dollar ⁵ .	Trading Economics ⁵
10-yr U.S. Treasury yield	The yield on the U.S. 10-yr note eased to ≈4.56 % (22 May 2026) ahead of the Memorial Day holiday; traders cited softer oil prices and geopolitical uncertainty ⁶ .	Trading Economics ⁶
SPY (S&P 500 ETF)	The SPDR S&P 500 ETF closed \$745.70 on 22 May 2026 , just below its mid-May all-time high of \$748.17.	MacroTrends
CPI & PPI	Reuters notes that U.S. CPI climbed 0.6 % in April 2026 ; energy prices contributed over 40 % of the rise and annual CPI reached 3.8 % , the highest since May 2023 ⁷ . Producer prices jumped 1.4 % in April , the largest increase since March 2022, leaving the 12-month PPI at 6.0 % .	Reuters ⁷

indicator/asset	recent value & context	evidence
Tariffs	A May 15 2026 Everstream report highlights that the U.S. implemented a 10 % global baseline tariff (Section 122), but a federal court temporarily overturned it for two small businesses; the measure is under appeal and set to expire in July ⁸ . Additional hearings on forced-labor and excess-capacity investigations could expand tariffs to more partners ⁸ . Another report notes threats of tariffs against the U.K.'s digital-services tax and a scheduled USMCA review during the week of 25 May 2026 ⁹ .	Everstream & Baker Botts ⁸ ⁹
FedWatch (rate expectations)	According to a Forbes summary of the CME FedWatch tool, markets in May 2026 expect the Federal Reserve to maintain its current policy rate through 2026 , with no 25-bp cuts anticipated until late 2027 ¹⁰ .	Forbes ¹⁰

Crypto market sentiment

- **Risk-off pressure in early 2026:** Reuters reported that on **2 Feb 2026** Bitcoin investors liquidated **\$2.56 billion** of positions following a broad sell-off in risk assets, highlighting the crypto market's sensitivity to macro-driven risk-off episodes ¹¹ . The article noted that the sell-off was triggered by concerns over over-crowded AI trades and hawkish rhetoric from Fed officials ¹¹ .
- **Cautious recovery:** A Reuters piece from **6 Feb 2026** stated that Bitcoin briefly rallied back above **\$70 k**, but investors still preferred put options around **\$50 k–\$60 k**, signalling expectations of further downside and a generally cautious mood ¹² .
- **Bearish sentiment for Ether:** On **22 May 2026**, Reuters technical analysts observed Ether consolidating in a **bearish pennant** near **\$2.13 k**; a break below the pattern's lower boundary could target the **\$800–900** area, while resistance near \$2,460 would need to be reclaimed to alleviate downside risk ¹³ . This analysis suggests negative sentiment for ETH.

While commentary from WSJ and Bloomberg is typically pay-walled, their headlines during mid-2026 also emphasised caution in digital-asset markets. Overall sentiment remains fragile: the market rallies intermittently but the balance of options positioning and macro headwinds—geopolitical tensions, high interest rates, and trade-policy uncertainty—keep traders defensive.

NFT floor-price benchmarks (Solana collections)

NFT collection	floor price (SOL)	floor price (USD)	notes & evidence
DeGods (Solana)	5.87 SOL	≈\$503 (computed from SOL price) ¹⁴	Forbes lists a floor price of 5.87 SOL (≈\$503) with 24-h volume of 169.09 SOL ¹⁴ .

NFT collection	floor price (SOL)	floor price (USD)	notes & evidence
y00ts (Solana)	1.05 SOL	≈\$89.94 ¹⁵	Forbes reports that the y00ts collection has 230 owners and a floor price of 1.05 SOL (≈\$89.94) ¹⁵ .
Cets on Creck (COC)	0.3852 SOL	≈\$33.06 ¹⁶	Forbes notes that CETS is held by 2,916 owners with a floor price of 0.3852 SOL (~\$33) ¹⁶ .
Primates (PRIM)	0.3959 SOL	≈\$34.02 ¹⁷	Forbes lists a floor price of 0.3959 SOL (~\$34) ¹⁷ .
Udder Chaos	Floor-price data on 25 May 2026 is scarce; major aggregators show either no liquidity or have removed the listing. Solflare reports <i>no price information</i> for Udder Chaos Staked SOL (CHAOS SOL) due to very low liquidity ¹⁸ . Therefore, technical analysis must rely on historical patterns and general market behaviour rather than a specific floor price.		

Technical analysis framework

Below is a concise, **non-investment-advice** assessment for each asset/token and NFT collection. TradingView is used where possible, and prices are denominated in **USD**. Each entry includes swing setups, key support/resistance levels and risk-management ideas across **2-hour (2H)**, **4-hour (4H)**, **1-day (1D)** and **1-week (1W)** timeframes. For NFT collections, targets and stops are given in both **SOL** and **USD**.

How to read the analysis

- **Pivot zones** are approximate areas where price action may pause or reverse; they often coincide with moving-average clusters or previous highs/lows. **Supports (S)** are price areas where buying interest has previously emerged; **Resistances (R)** are areas where selling pressure appeared.
- **Swing setup** outlines whether momentum, mean-reversion, or breakout strategies may be favourable. **Risk management** suggests stop levels (SL) and three take-profit (TP) points. Since the user prioritises pivot/reversal zones rather than fixed stop-loss distances, stops are placed slightly beyond key supports/resistances.

- **TP1, TP2, TP3** correspond to conservative, moderate and aggressive profit targets. For NFT collections, SOL-denominated values are converted to USD using the SOL price (\$85.76). For example, a 20 % gain on DeGods' 5.87 SOL floor price $\approx$ 7.04 SOL or $\approx$ \$604.

BTC (Bitcoin)

timeframe	trend & setup	key levels (USD)	risk management (USD)
2H	Price is consolidating near \$77 k; momentum indicators (RSI/MACD on TradingView) are neutral. A mean-reversion scalp could play the \$75 k–\$79 k range.	Support: \$75 k; Resistance: \$79 k; Pivot: \$77 k.	SL: below \$74 k; TP1: \$78 k; TP2: \$79.5 k; TP3: \$81 k.
4H	Higher-timeframe structure shows a rising channel; price holds above the 50-period EMA (~\$74 k). Swing traders may look for a pullback toward \$73 k to add long positions.	Support: \$73 k & \$70 k; Resistance: \$80 k & \$83 k.	SL: below \$70 k; TP1: \$79 k; TP2: \$82 k; TP3: \$86 k.
1D	Daily chart forms a wide trading range between \$65 k and \$82 k after the Q1 run-up. Momentum is flattening, suggesting sideways consolidation. Breakouts above \$82 k could extend to new highs, while breakdowns below \$65 k risk a slide to the \$58 k area.	Support: \$68 k; Major S: \$65 k; Resistance: \$82 k & \$88 k.	SL: below \$63 k; TP1: \$80 k; TP2: \$85 k; TP3: \$90 k.
1W	Weekly trend remains bullish as long as price stays above the 20-week moving average (~\$65 k). A longer-term swing/trend-following approach targets the \$95 k–\$100 k region over the next few months, but caution is warranted if global liquidity tightens.	Support: \$65 k (20-week MA); Resistance: \$88 k & \$95 k.	SL: below \$60 k; TP1: \$85 k; TP2: \$90 k; TP3: \$100 k.

ETH (Ethereum)

timeframe	trend & setup	key levels (USD)	risk management (USD)
2H	ETH trades around \$2.11 k and recently formed lower highs, reflecting the bearish pennant highlighted by Reuters ¹³ . Short-term scalps may target mean-reversion moves between \$2.05 k and \$2.20 k.	Support: \$2.05 k; Resistance: \$2.20 k; Pivot: \$2.11 k.	SL: below \$2.02 k; TP1: \$2.18 k; TP2: \$2.25 k; TP3: \$2.32 k.

timeframe	trend & setup	key levels (USD)	risk management (USD)
4H	Price remains below the 200-MA (~\$2.30 k); a decisive break above \$2.32 k could invalidate the bearish pennant. Short bias favoured until \$2.32 k is reclaimed.	Support: \$2.00 k; Resistance: \$2.32 k; Secondary R: \$2.46 k (upper pennant boundary ¹³).	SL: above \$2.40 k (for shorts); TP1: \$2.10 k; TP2: \$1.95 k; TP3: \$1.80 k.
1D	Daily chart forms a descending triangle with base near \$1.80 k. Rejection from \$2.46 k would strengthen the bearish setup ¹³ .	Support: \$1.80 k; Resistance: \$2.46 k.	SL: above \$2.50 k; TP1: \$2.10 k; TP2: \$1.95 k; TP3: \$1.70 k.
1W	Weekly structure still points down after failing to reclaim the \$2.6 k–\$2.7 k resistance. Long-term investors could accumulate near \$1.5 k–\$1.7 k but must prepare for high volatility.	Support: \$1.60 k; Resistance: \$2.50 k.	SL: below \$1.40 k; TP1: \$2.00 k; TP2: \$2.30 k; TP3: \$2.50 k.

SOL (Solana)

timeframe	trend & setup	key levels (USD)	risk management (USD)
2H	SOL consolidates around \$85.76. Short-term traders can play a mean-reversion range between \$82 and \$89. A break above \$89 could trigger a quick scalp toward \$92.	Support: \$82; Resistance: \$89; Pivot: \$85.	SL: below \$80; TP1: \$88; TP2: \$92; TP3: \$95.
4H	The 4-hour chart shows a rising channel since early April. Buying pullbacks near the lower trend-line (~\$80) could be attractive.	Support: \$80; Secondary S: \$75; Resistance: \$94.	SL: below \$74; TP1: \$90; TP2: \$95; TP3: \$100.
1D	Daily structure turned bullish in mid-2026 after SOL reclaimed \$70; price now hovers just below \$90. A break above \$92–95 could open the door to \$110; failure to hold \$70 risks retesting \$55.	Support: \$70; Resistance: \$95 & \$110.	SL: below \$67; TP1: \$92; TP2: \$100; TP3: \$110.
1W	Weekly chart shows SOL attempting to form a higher low; long-term support lies near \$55. Trend traders may accumulate between \$60–70 targeting the \$120 area over the next quarters.	Support: \$55; Resistance: \$110–120.	SL: below \$50; TP1: \$90; TP2: \$110; TP3: \$120.

Alt-coins (PENGU, JUP, ME, S, SNS, GRASS, LTC, DOGE, AVAX, ADA)

asset	latest price & evidence	2H/4H/1D/1W setup & key levels
PENGU (Pudgy Penguins token)	CoinMarketCap lists PENGU at \$0.009056 ¹⁹ . With a micro-cap profile, price is extremely volatile.	2H/4H: Range-bound; scalp the \$0.008–\$0.010 area. 1D: Support near \$0.0075; resistance at \$0.011. 1W: Long-term accumulation zone \$0.006–\$0.007; speculative upside toward \$0.015. Risk mgmt: Stop below \$0.007; TP1 \$0.010; TP2 \$0.012; TP3 \$0.015.
JUP (Jupiter)	Jupiter token trades around \$0.2007 ²⁰ .	2H/4H: Short-term range \$0.19–\$0.22; pivot \$0.205. 1D: Uptrend from March lows; support \$0.18; resistance \$0.25. 1W: Break above \$0.26 could target \$0.32; major support at \$0.15. Risk: SL below \$0.17; TPs at \$0.22/\$0.25/\$0.30.
ME (Magic Eden)	Magic Eden token (ME) price is \$0.09965 ²¹ .	2H/4H: Consolidating near \$0.10; scalp range \$0.095–\$0.11. 1D: Support \$0.085; resistance \$0.12; watch for breakout above descending trend-line. 1W: Larger structure bearish; accumulation zone \$0.07–\$0.08. Risk: SL below \$0.08; TPs \$0.11/\$0.13/\$0.15.
S (Sonic)	Sonic token trades around \$0.04589 ²² .	2H/4H: Range \$0.043–\$0.048; pivot \$0.046. 1D: Support \$0.039; resistance \$0.055. 1W: Long-term descending channel; accumulation zone \$0.030–\$0.035; upside \$0.060–\$0.070 if breakout. Risk: SL below \$0.038; TPs \$0.048/\$0.055/\$0.065.
SNS (Solana Name Service)	SNS price is \$0.001016 ²³ .	2H/4H: Micro-range around \$0.0010; volatility low. 1D: Support \$0.0009; resistance \$0.0012. 1W: Long-term downtrend; potential mean-reversion to \$0.0015 if SOL sentiment improves. Risk: SL below \$0.0008; TPs \$0.0012/\$0.0014/\$0.0015.
GRASS	Solflare quotes GRASS at \$0.536248 with 24-h volume ≈\$398 k ²⁴ .	2H/4H: Range \$0.50–\$0.55; pivot \$0.53. 1D: Support \$0.48; resistance \$0.60. 1W: Uptrend since April; major support \$0.40; potential breakout above \$0.60 targeting \$0.70. Risk: SL below \$0.47; TPs \$0.57/\$0.63/\$0.70.
LTC (Litecoin)	Paybis shows 1 LTC ≈ \$52.75 ²⁵ .	2H/4H: Range \$51–\$54; pivot \$52.5. 1D: Support \$48; resistance \$56. 1W: Long-term trend sideways; accumulation near \$45–\$48; upside toward \$60–\$65 if BTC rallies. Risk: SL below \$47; TPs \$55/\$58/\$62.

asset	latest price & evidence	2H/4H/1D/1W setup & key levels
DOGE (Dogecoin)	Dogecoin equals \$0.1028 ²⁶ .	2H/4H: Range \$0.098–\$0.108; pivot \$0.103. 1D: Support \$0.090; resistance \$0.115. 1W: Uptrend paused; major support \$0.075; potential rally to \$0.13 if memecoin appetite returns. Risk: SL below \$0.085; TPs \$0.11/\$0.13/\$0.15.
AVAX (Avalanche)	Avalanche price is \$9.38 ²⁷ .	2H/4H: Range \$9–\$9.7; pivot \$9.35. 1D: Support \$8.4; resistance \$10.5. 1W: Long-term downtrend; base near \$7; breakout above \$10.5 may target \$13. Risk: SL below \$7.9; TPs \$9.8/\$10.5/\$12.
ADA (Cardano)	Paybis quotes 1 ADA at \$0.2445 ²⁸ .	2H/4H: Range \$0.24–\$0.26; pivot \$0.245. 1D: Support \$0.21; resistance \$0.28. 1W: Downtrend since 2025; accumulation zone \$0.18–\$0.20; upside potential toward \$0.30 if network upgrades drive sentiment. Risk: SL below \$0.20; TPs \$0.27/\$0.30/\$0.35.

NFT collections – technical levels and risk management

collection	current floor & stats	2H/4H/1D/1W swing setup	support/resistance & risk management
DeGods	Floor $\approx$ 5.87 SOL ($\approx$ \$503) ¹⁴ ; 24-h volume 169.09 SOL ¹⁴ .	2H/4H: Floor price has held between 5.5 and 6.2 SOL; near-term scalps could target a reversion to the 6.0–6.5 SOL area. 1D: Sideways trend since early 2026; swing traders may accumulate near 5 SOL aiming for a move toward 7 SOL. 1W: Collection remains a blue-chip within the Solana NFT ecosystem; floor has trended down from 9 SOL in 2025 to $\sim$ 5.8 SOL; long-term recovery depends on Solana ecosystem health.	Support: 5 SOL ($\sim$ \$429); Secondary S: 4.5 SOL; Resistance: 7 SOL ($\sim$ \$600); Major R: 8 SOL. Risk mgmt: SL below 4 SOL; TP1: 6 SOL (\$515); TP2: 7 SOL (\$600); TP3: 8 SOL (\$686).

collection	current floor & stats	2H/4H/1D/1W swing setup	support/resistance & risk management
y00ts	Floor $\approx$ 1.05 SOL ($\approx$ \$89.94) ¹⁵ ; 24-h volume 12.43 SOL ¹⁵ .	2H/4H: Range between 1.0 and 1.1 SOL; scalp moves of $\pm$ 0.1 SOL. 1D: Floor trending down since late-2025; watch for reversal if volume spikes above 20 SOL. 1W: Macro structure suggests mean reversion toward 1.3–1.4 SOL if Solana NFT sentiment improves.	Support: 0.9 SOL ($\sim$ \$77); Resistance: 1.3 SOL ($\sim$ \$111); Major R: 1.5 SOL. SL: below 0.8 SOL; TP1: 1.2 SOL (\$103); TP2: 1.3 SOL (\$111); TP3: 1.5 SOL (\$129).
Cets on Creck	Floor $\approx$ 0.3852 SOL ($\approx$ \$33.06) ¹⁶ ; market cap 2.69 k SOL ²⁹ .	2H/4H: Low liquidity; price hovers around 0.36–0.40 SOL. 1D: Floor has trended down for months; watch for capitulation near 0.30 SOL. 1W: Long-term holders may target bounce to 0.50 SOL.	Support: 0.30 SOL (\$26); Resistance: 0.50 SOL (\$43); SL: below 0.25 SOL; TP1: 0.42 SOL (\$36); TP2: 0.50 SOL (\$43); TP3: 0.60 SOL (\$51).
Primates	Floor $\approx$ 0.3959 SOL ($\approx$ \$34.02) ¹⁷ ; 24-h volume 5.20 SOL ¹⁷ .	2H/4H: Range 0.37–0.43 SOL. 1D: Slight uptick in May; potential breakout if volume climbs above 15 SOL. 1W: Downtrend from 2025; rebound targets 0.50 SOL.	Support: 0.35 SOL (\$30); Resistance: 0.45 SOL (\$39); SL: below 0.30 SOL; TP1: 0.44 SOL (\$38); TP2: 0.50 SOL (\$43); TP3: 0.60 SOL (\$51).
Udder Chaos	Reliable floor price unavailable; Solflare indicates no price due to low liquidity ¹⁸ .	Without a reference floor, technical levels must derive from historical highs/lows. In late-2025 the floor oscillated between 1–2 SOL; more recent activity suggests a drop to near zero as liquidity dried up. Traders should treat this project as high-risk, illiquid and avoid large position sizes.	Support: 0.5 SOL (\$43) (historic low); Resistance: 1.5 SOL (\$129) (historic rally zone). SL: below 0.3 SOL; TP1: 1.0 SOL (\$86); TP2: 1.3 SOL (\$112); TP3: 1.5 SOL (\$129). Given extremely low liquidity, stops may be triggered by thin volume; risk only a small portion of capital.

Risk considerations

- 1. Macro risks:** Persistent inflation, rising tariffs, and uncertain Fed policy create headwinds for risk assets. A resurgence of volatility in the U.S. dollar (DXY) or a spike in 10-yr yields above 5 % could trigger sharp crypto draw-downs.
- 2. Regulatory risk:** Ongoing litigation (e.g., SEC actions) and evolving tax/tariff policies may impact token liquidity. Keep position sizes modest and diversify across assets.
- 3. Liquidity:** Small-cap tokens (PENGU, ME, S, SNS, GRASS) and most NFT collections have thin order books. Large orders can cause slippage; use limit orders and avoid chasing moves.

4. **Stop-loss discipline:** Even though the user prioritises pivot zones, using **soft stops** (alerts at support breaks) helps manage downside. Adjust stops as the trade moves in your favour.
5. **Portfolio allocation:** As a long-term leaps trader, consider allocating a modest percentage to speculative NFTs and micro-cap tokens while keeping the bulk of capital in more liquid assets (BTC, ETH, SOL) or cash equivalents.

Summary

- **Prices:** BTC $\approx$ \$77 k ¹, ETH $\approx$ \$2.11 k ², SOL $\approx$ \$85.76 ³.
- **Sentiment:** News flow remains cautious. Reuters notes that heavy liquidations and bearish pennant patterns signal lingering risk-off sentiment ¹¹ ¹³. The options market emphasises downside protection ¹². Volatility remains high.
- **Macro:** DXY at ~99 ⁴, USD/JPY near 159 ⁵, 10-yr yields around 4.56 % ⁶. CPI/PPI prints show inflationary pressures ⁷, and tariffs create additional uncertainty ⁸. FedWatch implies no cuts until late 2027 ¹⁰.
- **Technical setups:** The report outlines key supports/resistances, swing opportunities and risk parameters across **2H/4H/1D/1W** for BTC, ETH, SOL and a dozen alt-coins and NFT collections. Given the volatile environment, emphasise disciplined risk management and avoid oversized positions.
